**Curriculum Vitae**

Frank Osterloh was educated at the Carl von Ossietzky Universität in Oldenburg, Germany and graduated with B.S., M.S., and Ph.D. degrees in chemistry. After postdoctoral work (1997-2000) at Harvard University under the supervision of Prof. Richard H. Holm, he joined the faculty in Chemistry at the University of California at Davis as an Assistant Professor in 2000 and was promoted to Associate Professor in 2006, and then Professor in 2011. Frank's research interests are focused on the preparation and characterization of inorganic (nano-) materials and their application to solar energy conversion and artificial photosynthesis. One research thrust is the development of inorganic materials as photocatalysts for the overall water splitting reaction - a method to convert solar energy into hydrogen fuel. Another one is to employ surface photovoltage spectroscopy for the characterization of photochemical charge separation in molecular, semiconducting polymeric, and inorganic light absorbers. For his contributions to nanoscience and energy research, Frank received the 2010 Inorganic Nanoscience Award and the 2014 Richard Glenn Award of the American Chemical Society. In 2016, Frank became a Fellow of the Royal Society of Chemistry. Frank also serves as associate editor for the Journal of Materials Science A, Materials for Energy and Sustainability.
